A unique opportunity in Cloud Computing !

The Company

Our client is a leading manufacturer of electronic security systems (intruder alarm, physical access control, CCTV, integration) supplying security installers, integrators and ICT service companies worldwide.

Objectives of the position

To support the introduction and deployment of a revolutionary Software as a Service (SaaS) approach, they are looking for two Technical Project Managers for their European headquarters located in Brussels.

Job description

- Serve as a technical authority with an overall responsibility for delivery and commissioning of solutions and services. Accountable to Secure projects execution according to obligations with superior customer satisfaction, high quality and within budget.
- Manage all project technical aspects, from presale negotiation through specification signup and contract phase to complete delivery of a solution to the customer.
- Overall responsibility for technical communication with customer, including managing complex problem solving situations, coordinate technical queries with R&D and work closely with the Customer Support to supply proper handling to malfunction situations.
- Serve as technical consultant regarding new initiatives and services.

Qualifications

- University degree (Master) in Telecommunications Engineering, or Computer Engineering, or Computer Science or Electrical/Electrical Engineering.

Experience & Competences

- 5 to 10 years experience in ICT project management
- In-depth knowledge of complex IT infrastructures and networks
- Experience in deploying a SaaS model or external hosting services is a strong advantage
- Familiarity with security systems (intruder alarm, physical access control, CCTV) will be considered as a plus

Profile

- Self learner, self motivated, excellent team player, with a winning spirit and business orientation
- Analytical skills, system oriented, creative and flexible, able to deliver quality service
- High assertiveness & endurance, while responsive
- Commercial acumen
- Good communication and interpersonal skills.
- Willingness to travel frequently in France and/or The Netherlands

Languages

- Very good command of English
- 1 Technical Project Manager has to be perfectly fluent in English and French.
- 1 Technical Project Manager has to be perfectly fluent in English and Dutch.

Offer

- Join a dynamic and international company strongly investing in innovation
- Take part in the deployment of a Cloud Computing (SaaS) approach
- A challenging job in a young and energetic environment. Professional development with internal and external training as well as Career path opportunities within the company.
- Attractive salary with benefits package such as lunch vouchers, group and medical insurances, Blackberry, laptop and company car.
